FILE COVERS 1971 TO PATENT PUBLICATION DATE: 18 Dec 2003 (20031218/PD)
 FILE LAST UPDATED: 18 Dec 2003 (20031218/ED)
 HIGHEST GRANTED PATENT NUMBER: US6665873
 HIGHEST APPLICATION PUBLICATION NUMBER: US2003233693
 CA INDEXING IS CURRENT THROUGH 18 Dec 2003 (20031218/UPCA)
 ISSUE CLASS FIELDS (/INCL) CURRENT THROUGH: 18 Dec 2003 (20031218/PD)
 REVISED CLASS FIELDS (/NCL) LAST RELOADED: Oct 2003
 USPTO MANUAL OF CLASSIFICATIONS THESAURUS ISSUE DATE: Oct 2003

>>> USPAT2 is now available. USPATFULL contains full text of the original, i.e., the earliest published granted patents or applications. USPAT2 contains full text of the latest US publications, starting in 2001, for the inventions covered in USPATFULL. A USPATFULL record contains not only the original published document but also a list of any subsequent publications. The publication number, patent kind code, and publication date for all the US publications for an invention are displayed in the PI (Patent Information) field of USPATFULL records and may be searched in standard search fields, e.g., /PN, /PK, etc.

>>> USPATFULL and USPAT2 can be accessed and searched together through the new cluster USPATALL. Type FILE USPATALL to enter this cluster.
 >>> Use USPATALL when searching terms such as patent assignees, classifications, or claims, that may potentially change from the earliest to the latest publication.

AB The invention relates to agents for protecting plants and/or parts of plants from insects and insect larvae and from microbial attack. The agents are lipophilic GRAS (generally recognized as safe) flavoring compds and hydrophilic GRAS. The lipophilic GRAS flavoring compds. are alcs. (benzyl alc., 1- or 2-phenylethanol, cinnamic alc., hydrocinnamic alc., etc.). The hydrophilic GRAS agents are alcs. (ethanol, propanol, isopropanol, etc.) or organic acids.

L157 ANSWER 6 OF 7 CROPU COPYRIGHT 2003 THOMSON DERWENT on STN
ACCESSION NUMBER: 2001-85675 CROPU F G
TITLE: Decontamination or preservation of materials, e.g. wood or paper, using mixture of two or more aroma components, e.g. **benzyl alcohol** and **tannin**, having broad-spectrum **antimicrobial** and antiparasitic activity.
INVENTOR: Schuer J P
LOCATION: Wegberg, Ger.
PATENT INFO: DE 19940605 A1 20010301
APPLICATION INFO: DE 1999-19940605 19990827
DOCUMENT TYPE: Patent
LANGUAGE: German
OTHER SOURCE: WPI: 2001-301223
FIELD AVAIL.: AB; LA; CT
AB A method for impregnating and treating microbially degradable, contaminable and/or spoilable materials/articles (A) or parasite-infested (A) by applying or distributing an **antimicrobial**/antiparasitic composition on the surface of (A) and/or incorporating the composition into (A), the active composition contains at least two GRAS (generally recognized as safe) aroma components (I), is claimed. An example was given for a surface self-decontamination composition containing 10% polyphenol (viz., **tannin (tannic acid)**), 18.2% **benzyl alcohol**, 60.0% polyethylene glycol, 8.0% **lactic acid** and 3.8% of a phenolic ethereal oil. The efficacy of the composition as a wood surface spray treatment (5.1-18.5 g/sq m) and by impregnation (60 and 185 g/sq m) was assessed against mold on fir (resinous and whole wood parts) and a tropical wood (bangkirei).

L157 ANSWER 7 OF 7 CROPU COPYRIGHT 2003 THOMSON DERWENT on STN
ACCESSION NUMBER: 2001-84694 CROPU I F G
TITLE: Protection of **plants** against insect or microbial attack, using mixture of two or more aroma components, e.g. **benzyl alcohol** and **tannin**, having broad-spectrum **antimicrobial** and insecticidal activity and low toxicity.
INVENTOR: Schuer J P
LOCATION: Wegberg, Ger.

PATENT INFO: DE 19940283 A1 20010301
APPLICATION INFO: DE 1999 19940283 19990825
DOCUMENT TYPE: Patent
LANGUAGE: German
OTHER SOURCE: WPI: 2001-236074
FIELD AVAIL.: AB; LA; CT

AB A method for protecting **plants** and/or **plant** parts against insects, insect larvae or microbial attack, comprising application or distribution of an insecticidal or **antimicrobial** composition (A) on the surface of the **plants** and/or incorporating (A) in the **plants**, where (A) contains at least two GRAS (generally recognized as safe) aroma components (I), provided that one of (I) is **benzyl alcohol** (BA) in the case of **antimicrobial** treatment, is claimed. In insecticidal/**antimicrobial** bioassays, a spray mixture of 10.0% polyphenol (viz. **tannic acid**), 18.2% BA, 60.0% **propylene glycol**, 8.0% **lactic acid** and 3.8% phenol-containing ethereal oil, in water or **rapeseed oil**, gave good control of e.g. *Myzus persicae* larvae, *Fusarium* sp., *Aspergillus ochraceus*, *A. niger*, *Penicillium* sp, *Rhizoctonia* sp., *Peronospora* sp., *Phytophthora* sp. and *Botrytis cinerea* in **wheat**, tobacco and coffee.

AB The plant growth regulators are emulsified or solubilized compns. containing naturally occurring antimicrobial substances (e.g., essential oils, proteins, plant exts.) and surfactants or higher alc.-based nonionic surfactants. Water may be used in place of or in addition to surfactants or higher alc.-based nonionic surfactants. The plant growth regulators also show insecticidal and antimicrobial effects (no data).

AB The invention relates to agents for protecting plants and/or parts of plants from insects and insect larvae and from microbial attack. The agents are lipophilic GRAS (generally recognized as safe) flavoring compds and hydrophilic GRAS. The lipophilic GRAS flavoring compds. are alcs. (benzyl alc., 1- or 2-phenylethanol, cinnamic alc., hydrocinnamic alc., etc.). The hydrophilic GRAS agents are alcs. (ethanol, propanol, isopropanol, etc.) or organic acids.

AB A clove oil formulation which inhibits soil-borne fungal diseases is disclosed. The formulation includes about 70-90 % by weight rectified clove oil, and about 2-30 % by weight surfactant. The surfactant includes about 15-95 % by weight nonionic compds., such as ethoxylated monoglycerides,

ethoxylated diglycerides, ethoxylated alcs., silicone glycol copolymers, sorbitan fatty acid esters, ethoxylated alkyl **phenols**, ethylene oxide block copolymers, and propylene oxide block copolymers. The surfactant further includes about 5-85 % by weight anionic compds., such as amine alkylaryl sulfonate, calcium alkylaryl sulfonate and phosphate esters. The formulation may also include ≤ 30 % by weight solvent, such as alc., esters, glycol ethers, mineral oil, Me esters and hydrocarbon solvents.

AB Volatiles including allyl isothiocyanate (AIT) in herbs were examined to evaluate their antimicrobial activities by gaseous contact. Combination effects of volatiles were also examined AIT suppressed the growth of all microorganisms tested. Salicylaldehyde also showed antimicrobial effects to all fungi and bacteria tested. Other aldehydes showed inhibitory effects on the growth of fungi and Bacillus subtilis. Hydrocarbons inhibited the growth of B. subtilis. In the case of Staphylococcus aureus, carvacrol was more effective to suppress its growth than AIT. Masking effects of plant volatiles on AIT odor were confirmed with sensory anal. Citrus oils and vanilla flavor were superior for masking AIT odor.

Antimicrobial effects of AIT were not affected by mixing with plant volatiles.

L158 ANSWER 9 OF 12 HCAPLUS COPYRIGHT 2003 ACS on STN

ACCESSION NUMBER: 1994:71533 HCAPLUS
DOCUMENT NUMBER: 120:71533

AB Pisiferic acid and its homologs which were contained in Chamaecyparis pisifera and its cultivars had great anti-oxidative and miticidal activities. The anti-oxidative activities of pisiferic acid and pisiferol were 45-60 that of control, and 4-10 times that of α -tocopherol. The oxidized compds. had greater miticidal activities. Carboxyl group contributed greatly to miticidal activities of pisiferic acid and its homologs, on the other hand **phenolic** group did not. The essential oils and extractives from the bogwood of yakusugi, which is a variety of Cryptomeria japonica, have been studied quant. in addition to normal yakusugi and sanmusugi, which is also a variety of C. japonica growing on Honsyu, the main island of Japan. The amount of essential oils from the bogwood of yakusugi was 25 times that from sanmusugi and 6 times that of normal wood. The essential oils of yakusugi and its bogwood contained much more oxygenated compds., such as sesquiterpene alcs. and ketones, than those of sanmusugi. The miticidal activities of the extractives and the essential oils from yakusugi on house dust mites has been studied. The n-hexane extractives and the essential oils from the bogwood of yakusugi had great miticidal activities as did the essential oils from the normal yakusugi. β -Eudesmol and cedrol had the great activities among the essential-oil components of yakusugi bogwood. The essential oils and extractives of normal yakusugi and its bogwood had germination delaying effects on radish seeds at 0.1%. Friedelin-3 α -yl acetate has been isolated from the leaves of Bischofia javanica. The methanol extractives of the leaves had growth delaying effects on radish seedlings. The oxygen consumption was measured after monoterpenes were added to hepatic microsomal fraction of rat. This method was effective as a preliminary screening to survey biol. active substance.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB A clove oil formulation which inhibits soil-borne fungal diseases is disclosed. The formulation includes about 70-90% by weight rectified clove oil, and about 2-30% by weight surfactant. The surfactant includes about 15-95% by weight nonionic compounds such as ethoxylated monoglycerides, ethoxylated diglycerides, ethoxylated alcohols, silicone glycol copolymers, sorbitan fatty acid esters, ethoxylated alkyl **phenols**, ethylene oxide block copolymers, and propylene oxide block copolymers. The surfactant further includes about 5-85% by weight anionic compounds such as amine alkylaryl sulfonate, calcium alkylaryl sulfonate and phosphate esters. The formulation may also include up to about 30% by weight of a solvent such as alcohol, esters, glycol ethers, mineral oil, methyl esters and hydrocarbon solvents.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

APPLICATION DETAILS:

PATENT NO	KIND	APPLICATION	DATE
WO 2003028451	A2	WO 2002-IL808	20021003

PRIORITY APPLN. INFO: IL 2001-145767 20011004

AB WO2003028451 A UPAB: 20030630

NOVELTY - Microbiocidal aqueous formulation (F) comprises at least one **essential oil** (A) or its derivatives and at least one stabilizer (B). The derivatives are obtained by exposure to light and/or by oxidation. (B) Comprises 10-50% ethanol, an emulsifier (C), an antioxidant (D) or an encapsulating agent (E).

ACTIVITY - **Plant antibacterial; Plant antifungal; Plant protectant; Antibacterial; Fungicide.**

In a test, unblemished harvested grapefruit were inoculated with *Penicillium digitatum* (106 spores/ml) to a depth of 1.5 mm in the flavedo tissue. The grapefruit were kept at 17 deg. C and 85% humidity for 24 hours and then dipped for 2 minutes in 0.2% citral in 25% ethanol which inhibited fruit decay for 18 days, compared to control fruit dipped in water which decayed after 8 days.

MECHANISM OF ACTION - None given.

USE - Used for inhibiting microbial development, protecting fruits and vegetables against pre- and **post-harvest** decay, preventing spoilage of meat or fish, preventing growth of *Staphylococcus aureus* and *Candida albicans* and as a nutraceutical composition (claimed). (F) Is also used to prevent decay of agricultural produce, for relieving or treating minor infections caused by microbials and protecting perishable agricultural produce from decay caused by microbials.

ADVANTAGE - (F) Improves decay resistance of perishable agricultural produce household and human hygiene by heat and ultraviolet treatment, is environmentally friendly as it prevents known phytotoxic damage of the **essential oil** components and the stability of the **essential oils**.

NOVELTY - In a method for protecting **plants** and/or **plant** parts against insects, insect larvae or microbial attack by applying or distributing an insecticidal or **antimicrobial** composition (A) on the surface of the **plants** and/or incorporating (A) in the **plants**, (A) contains at least two GRAS (generally recognized as safe) aroma components (I), provided that one of (I) is benzyl alcohol in the case of **antimicrobial** treatment.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the insecticidal or **antimicrobial**/biocidal (specifically **fungicidal** or **bactericidal**) compositions (A).

ACTIVITY - Insecticidal; **antibacterial**; **fungicidal**; virucidal.

MECHANISM OF ACTION - None given.

USE - The **plants** or **plant** parts to be treated are specifically cotton, **cereals**, rice, maize, potatoes, tobacco, coffee, cacao, tea, vegetables, fruit, nuts, spices, herbs, seeds, ornamental **plants**, growing flowers or cut flowers (all claimed).

ADVANTAGE - (I) are effective against a broad spectrum of insects and microorganisms, including mildews, rust fungi, Lepidoptera, Myzus persicae and viruses. They have good **antimicrobial** and insecticidal activity and low toxicity (allowing use shortly before or **after harvest**).

AB The invention relates to medicaments comprising a microbicidal composition consisting of at least two GRAS (Generally Recognized As Safe) aromatic agents or their derivs., and to the use of these compns. for producing decontamination and/or regenerative agents for treating humans and animals. Thus an antimicrobial composition contained (weight/weight%): anise alc.

45; borneol 35; rhodinol 20.

AB The invention concerns regenerative drugs, dietary supplements, feed
 additives that contain microorganisms and modulating substances, e.g.
 enzymes, GRAS (Generally Recognized As Safe) aromas, plant exts. Further
 the compns. contain vitamins, minerals, growth promoters, carrier

substances, etc. Microorganisms are a-pathogenic, pathogenic or facultative pathogenic,.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention relates to a process for improving the durability
 of, and/or stabilizing, microbially perishable products, in which,
 during the process for preparing, processing or packaging the products,

their surfaces and/or their environment, in particular the environmental air and/or the surfaces of the utensils or other materials which come directly or indirectly into contact with the products, are impacted with one or more process adjuvants, the process adjuvant comprising at least one microbicidally active flavouring substance.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB A bar soap preparation having enhanced antibacterial and microbial properties which contains between 0.1 weight % and 95 weight % of at least one anionic surfactant; and at least one acidifying agent present in an amount sufficient to impart a pH of below 5.0. The bar soap provides microbial protection resulting from its rapid microbicidal action.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The invention relates to dermatological agents and methods for treating dermatological disorders. The dermatological agents include a therapeutically effective amount of at least one acid selected from ellagic acid, ferrulic acid, caffeic acid, or **tannic acid** in an amount sufficient to strengthen cell membranes in the skin. The at least one acid is preferably combined with at least one of a moisturizing agent, an anti-inflammatory component, an immunity boosting component or an additional anti-oxidant, and a pharmaceutically acceptable carrier.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB This application relates to a pharmaceutical composition for the prevention, treatment, and management of scalp conditions, such as dandruff, seborrheic dermatitis, psoriasis, folliculitis, and hair thinning including a therapeutically effective amount of an acidic component of a hydroxyacid or tannic acid, or a pharmaceutically acceptable salt thereof. A preferred anti-dandruff composition and method of managing dandruff includes a therapeutically effective amount of the acid component, a vitamin A component, and an anti-growth agent. A preferred anti-hair thinning composition and method of managing thinning hair includes a therapeutically effective amount of the acidic component, a niacin component present in an amount sufficient to locally increase blood circulation, and a 5- α reductase inhibitor. The invention also relates to a method of treating chemically

processed air by administering to a patient an amount of an acidic component of a hydroxy acid or **tannic acid**, or a pharmaceutically acceptable salt thereof, in an amount sufficient to essentially close the cuticle and inhibit modification of the chemically processed hair.

AB During the production, processing or packing of items such as bread and meat, the surfaces of the products and/or their surroundings, in particular the surrounding air and/or surfaces of any equipment or material which comes directly or indirectly into contact with the products, are treated with one or more processing auxiliary agents containing at least one microbicidal flavoring agent. Thus, in tests in vitro a combination of 20% ethanol or isopropanol with a mixture of active ingredients containing 0.2% anisaldehyde and 0.04% oregano oil was highly inhibitory to *Aspergillus niger* and *Staphylococcus aureus*.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention relates to a process for improving the durability of, and/or stabilizing, microbially perishable products, in which, during the process for preparing, processing or packaging the products, their surfaces and/or their environment, in particular the environmental air and/or the surfaces of the utensils or other materials which come directly or indirectly into contact with the products, are impacted with one or more process adjuvants, the process adjuvant comprising at least one microbicidally active flavouring substance.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention relates to cosmetic formulations comprising a multi component controlled release system that imparts long lasting cooling sensation and/or provides high odor or flavor intensity (i.e., high impact fragrance or flavor burst) in response to moisture. The controlled delivery system of the present invention is substantially free-flowing powder formed of solid hydrophobic nano-spheres that are encapsulated in a moisture sensitive micro-spheres.
